

The Next Generation of Artemia Technology

Artemia Guard increases your production performance by significantly **suppressing Vibrio**

- Improves biosecurity in the hatchery for higher production performance
- Suppresses Vibrio growth during Artemia hatching thereby reducing the transfer of pathogens in early hatchery stages, resulting in higher production performance

The clear, clean water quality (at left) visibly demonstrates the power of Artemia Guard in reducing Vibrio

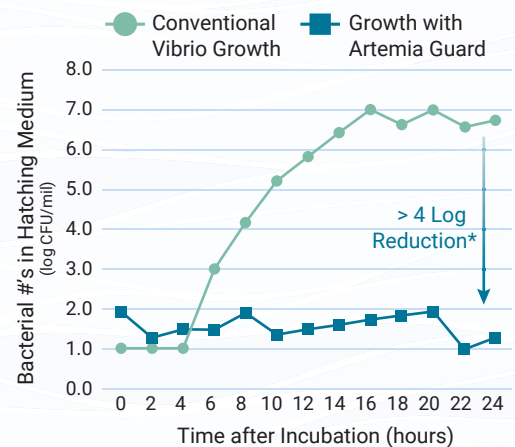

Improved biosecurity for greater hatchery production performance

Suppression of bacterial growth during Artemia cyst hatching effectively:

- Increases vitality and quality of Artemia nauplii – active and strong
- Reduces Artemia cyst hatching issues
- Improves shrimp and fish feeding (eat more, grow faster and bigger)

Artemia Guard Suppresses Vibrio Growth

* Eliminates Vibrio when used properly

YOUR
ULTIMATE
VIBRIO
PROTECTION

Higher **quality** and **vitality** of Artemia nauplii

Artemia Guard suppresses the transfer of pathogens in early hatchery stages:

- Producing active Artemia nauplii for the feeding of fish and shrimp
- Allowing for optimal enrichment of Artemia nauplii when required

Reliability of supply through science-based harvest management of the Great Salt Lake

We are committed to the sustainability of our natural resources through dedicated conservation and responsible harvest management. Over 20 years ago, the State of Utah, in partnership with the Artemia industry, implemented a **science-based management system** aimed at optimizing the Artemia population and cyst production, resulting in a **stable and sustainable** supply of quality Artemia cysts from the Great Salt Lake.
